

Royal Evolution : The Future Of Red Sea Diving

Built of steel, 39m long and 8.6m wide, Royal Evolution is quite possibly the most stable dive platform in the Red Sea, making her the ideal choice for reaching the more remote reefs in comfort.

Royal Evolution's 12 cabins (10 twin and 2 double) are all en-suite and spacious with ample storage space. Each cabin is equipped with fridge, satellite tv, dvd player and a safe for storing valuables.

2 chefs cater to the guest and crew providing 3 main meals a day and a variety of snacks. Royal Evolution's pastry chef bakes fresh bread throughout the trip.

Royal Evolution's dive staff specialise in providing support for photographers and videographers, recreational and technical divers, both open and closed circuit.

Royal Evolution has been designed with comfort and convenience in mind. From the sun loungers on the top deck to the huge dive deck, this is a boat that stands out from the others wherever she moors up.
